## I'm not a bot

```
which are on average half of a percentage point off the real vote share.[131]In some places, students have been forced to surrender their social media privacy. Organizations such as the ACLU call for more privacy protection. They urge students who are pressured to
give up their account information to resist.[133]Colleges and universities may access applicants' internet services including social media profiles as part of their admissions officers used Google to learn more about an applicant, and applicant, and applicant, and applicant internet services including social media profiles as part of their admissions process. According to Kaplan, Inc., a corporation that provides higher education preparation, in 2012 27% of admissions officers used Google to learn more about an applicant, and applicant, and applicant internet services including social media profiles as part of their admissions process.
with 26% checking Facebook.[134] Students whose social media pages include questionable material may be disqualified from admissions Officers, reported that 11 percent of respondents said they had refused to admit an applicant based on social
media content. This includes 8 percent of public institutions, where the First Amendment applies. The survey reported that 30 percent of institutions acknowledged reviewing the personal social media accounts of applicants at least some of the time."[135]Social media comments and images have been used in court cases including employment law,
child custody/child support, and disability claims. After an Apple for unfair dismissal, the court, after examining the employee sred in favor of Apple, stating that the posts breached Apple's policies.[136] After a couple broke up,
the man posted song lyrics "that talked about fantasies of killing the rapper's ex-wife" and made threats. A court reported him guilty.[136][clarification needed] In a disability claims case, a woman who fell at work claimed that she was permanently injured; the employer used her social media posts to counter her claims.[136][additional citation(s)
needed]Courts do not always admit social media evidence, in part, because screenshots can be faked or tampered with.[137] Judges may consider emojis into account to assess statements made on social media; in one Michigan case where a person alleged that another person had defamed them in an online comment, the judge disagreed, noting that
an emoji after the comment that indicated that it was a joke.[137] In a 2014 case in Ontario against a police officer regarding alleged assault of a protester during the G20 summit, the court rejected the Crown's application to use a digital photo of the protest that was anonymously posted online, because it included no metadata verifying its
provenance.[137][additional citation(s) needed]On April 9, 2024, the Spirit Lake Tribe in North Dakota and Menominee Indian Tribe of Wisconsin have sued social media companies (Meta Platforms-Facebook, Instagram; Snapchat, TikTok, YouTube, and Google) companies accused of deliberate misconduct. Their lawsuit describes "a sophisticated and
intentional effort that has caused a continuing, substantial, and longterm burden to the Tribe and its members," leaving scarce resources for education, cultural preservation and other social media as a news source. [edit] Social media as a news source is defined as the
use of online social media platforms such as Instagram, TikTok, and Facebook rather than the use of traditional media content into watchers of media content between the 1950s and the 1980s when the popularity of
social media had also began creating a nation of media content creators. Content creators are currently some of the most wealthy people nowadays. Almost half of Americans use social media as a news source, according to the Pew Research Center.[139] As social media role in news consumption grows, questions have emerged about its impact on
knowledge, the formation of echo chambers, and the effectiveness of fact-checking efforts in combating misinformation. Social media as a news source allows users to engage with news in a variety of ways
including:Consuming and discovering newsSharing or reports of news (i.e., engage in citizen or participatory journalism)Commenting on news postsUsing social media as a news source has become an increasingly more popular way for people of all age groups to obtain current and important
information. Just like many other new forms of technology there are going to be pros and cons. There are ways that social media positively affects the world of news and journalism but it is important to acknowledge that there are also ways in which social media has a negative effect on the news. With this accessibility, people now have more ways to
consume false news, biased news, and even disturbing content. In 2019, the Pew Research Center created a poll that reported Americans are wary about the ways that social media sites could be exploited by bad actors who concoct false
narratives and fake news.[144]Social media are used to socialize with friends and family[145] pursue romance and flirt,[145] but not all social media.[146] For example, a 2003 article reported that lonely individuals are more likely to use the Internet for emotional support than others.[147] A 2018 survey from Common
Sense Media reported that 40% of American teens ages 1317 thought that social media was "extremely" or "very" important to conduct meaningful conversations with close friends, and 23% of teens said social media was extremely or very important to conduct meaningful conversations with close friends, and 23% of teens said social
media was extremely or very important to document and share their lives. [148] A 2020 Gallup poll reported that 53% of adult social media users in the United States thought that social media was a very or moderately important way to keep in touch with people during the COVID-19 pandemic. [149] In Alone Together Sherry Turkle considered how
people confuse social media usage with authentic communication. [150] She claimed that people act differently online and are less concerned about hurting others' feelings. Some online encounters can cause stress and anxiety, due to the difficulty purging online posts, fear of getting hacked, or of universities and employers exploring social media
pages. Turkle speculated that many people prefer texting to face-to-face communication, which can contribute to loneliness.[150] Surveys from 2019 reported that exchanges that involved direct communication and reciprocal messages correlated with less
loneliness.[152]In social media "stalking" or "creeping" refers to looking at someone's "timeline, status updates, tweets, and online bios" to find information about them and their activities.[153] A sub-category of creeping ex-partners after a breakup.[154]Catfishing (creating a false identity) allows bad actors to exploit the lonely.[155]Self-
presentation theory proposes that people consciously manage their self-image or identity related information in social contexts.[156] One aspect of social media is the time invested in customizing a personal profile [157] Some users segment their audiences based on the image they want to present, pseudonymity and use of multiple accounts on the
same platform offer that opportunity.[158]A 2016 study reported that teenage girls manipulate their self-presentation on social media to appear beautiful as viewed by their peers.[159] Teenage girls attempt to earn regard and acceptance (likes, comments, and shares). When this does not go well, self-confidence and self-satisfaction can decline.[159]
A 2018 survey of American teens ages 1317 by Common Sense Media reported that 45% said likes are at least somewhat important, and 26% at least somewhat agreed that they feel bad about themselves if nobody responds to their photos.[148] Some evidence suggests that perceived rejection may lead to emotional pain,[160] and some may resort to
online bullying.[161] according to a 2016 study, users' reward circuits in their brains are more active when their photos are liked by more peers.[162] according to a 2016 study, users' reward circuits in their brains are more active when their photos are liked by more peers.[162] according to a 2016 study, users' reward circuits in their brains are more active when their photos are liked by more peers.[162] according to a 2016 study, users' reward circuits in their brains are more active when their photos are liked by more peers.[162] according to a 2016 study, users' reward circuits in their brains are more active when their photos are liked by more peers.[162] according to a 2016 study, users' reward circuits in their brains are more active when their photos are liked by more peers.[162] according to a 2016 study, users' reward circuits in their brains are more active when their photos are liked by more peers.[162] according to a 2016 study, users' reward circuits in their brains are more active when their photos are liked by more peers.[162] according to a 2016 study, users' reward circuits in their brains are more active when their photos are liked by more peers.[162] according to a 2016 study, users' reward circuits in their brains are more active when their photos are liked by more peers.[162] according to a 2016 study, users' reward circuits are liked by more peers.[162] according to a 2016 study according to 2016 study according to a 2016 study according to 2016 stud
is not achieved.[163] One 2016 study reported that Pinterest is directly associated with disordered dieting behavior.[164]People portray themselves on social media in the most appealing way.[159] However, upon seeing one person's curated persona, other people may question why their own lives are not as exciting or fulfilling. One 2017 study
reported that problematic social media use (i.e., feeling addicted to social media was the most influential source of their body
image satisfaction; while men reported them as the second biggest factor. [168] While monitoring the lives of celebrities long predates social media, the ease and immediacy of direct comparisons of pictures and stories with one's own may increase their impact. A 2021 study reported that 87% of women and 65% of men compared themselves to others.
on social media.[169]Efforts to combat such negative effects focused promoting body positivity. In a related study, women aged 1830 were reported posts that contained side-by-side images of women in the same clothes and setting, but one image was enhanced for Instagram, while the other was an unedited, "realistic" version. Women who
participated in this experiment reported a decrease in body dissatisfaction.[170]Further information: Cyberpsychology Social media and cyberpsychology Social media and cyberpsychology Social media and identitySocial media and cyberpsychology Social media and identitySocial media and identitySocial media and cyberpsychology Social media and cyberpsychology Socia
example, in a clinical study among adolescent patients undergoing obesity treatment, participants' claimed that social media allowed them to access personalized weight-loss content as well as social support among other adolescents with obesity.[172][173]While social media can provide health information, it typically has no mechanism for ensuring
the quality of that information.[173] The National Eating Disorders Association reported a high correlation between weight loss content and disorderly eating among women who have been influenced by inaccurate content. [173][174] Health literacy offers skills to allow users to spot/avoid such content. Efforts by governments and public health
organizations to advance health literacy reportedly achieved limited success.[175] The role of parents and difficulties they may encounter online, demonstrate some reductions in overall anxiety and depression among adolescents.
[176]Social media such as pro-anorexia sites reportedly increase risk of harm by reinforcing damaging health-related behaviors through social media, especially among adolescents.[177][178][179]During the coronavirus pandemic, inaccurate information from all sides spread widely via social media.[180] Topics subject to distortion included
treatments, avoiding infection, vaccination, and public policy. Simultaneously, governments and others influenced social media use was reportedly associated with more acceptance of conspiracy theories, leading to worse mental
health[182] and less compliance with public health recommendations. [183] Social media platforms can serve as a breeding ground for addiction-related behaviors, with studies report that excessive use can lead to addiction-related behaviors, with studies report that excessive use can lead to addiction-related behaviors.
which can result in decreased face-to-face social interactions and contribute to the deterioration of interpersonal relationships and a sense of loneliness.[184]This section is an excerpt from Cyberbullying (cyberharassment or online bullying) is a form of bullying or harassment using electronic means. Since the 2000s, it has become
increasingly common, especially among teenagers and adolescents, due to young people's increased use of social media.[185] Related issues include online harassment and trolling. In 2015, according to cyberbullying statistics from the iSafe Foundation, over half of adolescents and teens had been bullied online, and about the same number had
engaged in cyberbullying.[186] Both the bully and the victim are negatively affected, and the intensity, duration, and frequency of bullying are three aspects that increase the negative effects on both of them.[187]A 2017 study reported on a link between sleep disturbance and the use of social media. It concluded that blue light from computer/phone
displaysand the frequency rather than the duration of time spent, predicted disturbed sleep, termed "obsessive 'checking'".[188] The association between social media use experienced the most
sleep disturbance. The median number of minutes of social media use per day was 61. Females were more likely to experience high levels of sleep disturbance. [190] Many teenagers suffer from sleep deprivation from long hours at night on their phones, and this left them tired and unfocused in school. [191] A 2011 study reported that time spent on
Facebook was negatively associated with GPA, but the association with sleep disturbance was not established.[192]One studied effect of social media is 'Facebook depression', which can increase loneliness and low self-esteem.[8] Social media
curates content to encourage users to keep scrolling.[189] Studies report children's self-esteem is positively affected by positive comments and negatively affected by positive comments and negatively affected by positive comments and negatively affected by negative or lack of comments and negatively affected by negative or lack of comments and negatively affected by negative or lack of comments and negatively affected by negative or lack of comments and negatively affected by negative or lack of comments and negatively affected by negative or lack of comments and negatively affected by negative or lack of comments and negatively affected by negative or lack of comments and negatively affected by negative or lack of comments and negative or lack of 
social media use were more likely to report low self-esteem and high levels of depressive symptoms. [194] A second emotional exhaustion. Ambivalence is confusion about the benefits from using social media. Emotional exhaustion is stress from using social media
Depersonalization is emotional detachment from social media. [195]A third emotional effect is "fear of missing out" (FOMO), which is the "pervasive apprehension that others might be having rewarding experiences from which one is absent." [196] It is
associated with increased scrutiny of friends on social media. [196] Social media can also offer support as Twitter has done for the medical community for these individuals by and allowing members to support each other through
likes, comments, and posts.[198] Access to social media offered a way to keep older adults connected, after the deaths of partners and geographical distance between friends and loved ones.[199] In March 2025, a Pakistani man killed a WhatsApp group admin in anger after being removed from the chat.[200]This section is an excerpt from Social
media and suicide.[edit]Since the rise of social media, there have been numerous cases of individuals being influenced towards committing suicide or self-harm through their use of social media, and even of individuals arranging to broadcast suicide attempts, some successful, on social media. Researchers have studied social media and suicide to
determine what, if any, risks social media poses in terms of suicide, and to identify methods of mitigating such risks, if they exist. The search for a correlation has not yet uncovered a clear answer. Media critic Siva Vaidhyanathan refers to social media as 'anti-social media' in reference to its negative impacts including on loneliness and political
polarization.[201] Audrey Tang also uses the term antisocial in reference to its impact on democracy.[202]This section is an excerpt from Digital divide is the unequal access to digital divide worsens inequality around access to
information and resources. In the Information Age, people without access to the Internet and other technology are at a disadvantage, for they are unable or less able to connect with others, find and apply for jobs, shop, and learn. [203][205][206][207]People who are homeless, living in poverty, elderly people, and those living in rural communities may
have limited access to the Internet; in contrast, urban middle class and upper-class people have easy access to the Internet content, [208] While social media use varies across age groups, a US 2010 study reported no racial
divide.[211]See also: Social media Threat to democracy, Media bias social media, and Rage-baitingMany critics point to studies showing social media algorithms that filter and display news content that matches users' political preferences, one
potential impact is an increase in political polarization due to selective exposure occurs when an individual favors information that supports their beliefs and avoids information that conflicts with them. [214] Jonathan Haidt compared the
impact of social media to the Tower of Babel and the chaos it unleashed as a result.[215][216][13]Aviv Ovadya argues that these algorithms incentivize the creation of divisive content in addition to promoting existing divisive content, [217] but could be designed to reduce polarization instead.[218] In 2017, Facebook gave its new emoji reactions five
times the weight in its algorithms as its like button, which data scientists at the company in 2019 confirmed had disproportionately boosted toxicity, misinformation and low-quality news. [219] Some advocate for media literacy as a solution. [222]
Others argue that less social media,[214] or more local journalism[223][224][225] could help address political polarization. See also: Stereotypes can have both negative and positive connotations. For example, during the COVID-19 pandemic, youth were
accused of responsibility for spreading the disease. [227] Elderly people get stereotyped as lacking knowledge of proper behavior on social media. [228] Social media platforms usually amplify these stereotypes by reinforcing age-based biases through certain algorithms as well as user-generated content. Unfortunately, these stereotypes contribute to
social divide and negatively impact the way users interact online.[229]Social media allows for mass cultural exchange and intercultural communication, despite different ways of communication media allows for mass cultural exchange and intercultural communication, despite different ways of communication and despite 
illustrated by "LOL", which is the ubiquitous shortcut for "laugh out loud". The hashtag was created to simplify searching for information and to allow users to highlight topics of interest in the hope of attracting the attention of others. Hashtags can be used to advocate for a movement, mark content for future use, and allow other users to contribute to
a discussion.[232] For some young people, social media and texting have largely replaced in person communications, made worse by pandemic isolation, delaying the development of conversation and other social skills.[233] What is socially acceptable is now heavily based on social media.[234] The American Academy of Pediatrics reported that
bullying, the making of non-inclusive friend groups, and sexual experimentation have increased cyberbullying, privacy issues, and sexual images or messages. Sexting and revenge porn became rampant, particularly among minors, with legal implications and resulting trauma risk.[235][236][237][238] However, adolescents can learn basic
social and technical skills online.[239] Social media, can strengthen relationships just by keeping in touch, making more friends, and engaging in community activities.[8]This section needs expansion. You can help by adding to it. (July 2024)In July 2014, in response to WikiLeaks' release of a secret suppression order made by the Victorian Suprementations and engaging in community activities.
Court, media lawyers were quoted in the Australian media to the effect that "anyone who tweets a link to the WikiLeaks report, posts it on Facebook, or shares it in any way online could also face charges".[240]In November 2024, the federal government passed the Online Safety Amendment (Social Media Minimum Age) Bill 2024 introduced by the
Albanese government banning people under the age of 16 from using most social media platforms, which would come into effect in late 2025.[241] Presented by Minister for Communications Michelle Rowland, the bill was created as an attempt at reducing social media harms for young people and responding to the concerns of parents.[242] The
stated penalty for breach of the new laws on the part of social media platforms was a financial penalty of AU$49.5 million. [242][241] The ban would exempt platforms deemed to meet educational or health needs of people under 16, including
YouTube and Google Classroom.[242] Supporters of the ban included the advocacy group 36 Months[243] and media corporation News Corp Australia which ran a campaign titled Let Them Be Kids,[241] whilst opposers expressed concern that the ban could cause isolation amongst teenagers belonging to marginalised groups such as the LGBTQ
community or migrant/culturally diverse backgrounds, [244] and that the ban could stifle creativity and freedom of expression amongst young people. [245]On 27 July 2020, in Egypt, two women were sentenced to two years of imprisonment for posting TikTok videos, which the government claimed as "violating family values". [246]In the 2014 Thai coup
d'tat, the public was explicitly instructed not to 'share' or 'like' dissenting views on social media or face prison.[citation needed]Historically, platforms were responsible for moderating the content to grow to social media or face prison.[citation needed]Historically, platforms were responsible for moderating the content to grow to social media or face prison.[citation needed]Historically, platforms were responsible for moderating the content to grow to social media or face prison.[citation needed]Historically, platforms were responsible for moderating the content to grow to social media or face prison.[citation needed]Historically, platforms were responsible for moderating the content to grow to social media or face prison.[citation needed]Historically, platforms were responsible for moderating the content to grow to social media or face prison.[citation needed]Historically, platforms were responsible for moderating the content to grow to social media or face prison.[citation needed]Historically, platforms were responsible for moderating the content to grow to social media or face prison.[citation needed]Historically, platforms were responsible for moderating the content to grow to social media or face prison.[citation needed]Historically, platforms were responsible for moderating the content to grow 
Decency Act in 1996. Section 230 of that act exempted internet platforms from legal liability for content authored by third parties. No provider or user of an interactive computer service shall be treated as the publisher or speaker of any information provided by another information content provider. (47 U.S.C. 230(c)(1)). US Congress,
Communications Decency Act Section 230In 2024, legislation was enacted in Florida requiring social media companies to verify the age of people with accounts, and to prohibit holding an account for people aged under 14, and between 14 and 16 in the absence of parental approval. [248] The European Union initially took a similar approach. [249]
However, in 2020, the European Commission presented two legislative proposals: The Digital Services Act (DSA) and the Digital Markets Act (DMA). Both proposals were enacted in July 2022. The DSA entered into force on 17 February 2024, the DMA in March 2024. [250] This legislation can be summarized in the following four objectives, articulated
by MEPs: "What is illegal offline must also be illegal online". [251] "Very large online platforms" must therefore, among other thingsdelete illegal content (propaganda, election interference, hate crimes and online harms such as harassment and child abuse) and better protect fundamental rightsredesign their systems to ensure a "high level of privacy,
security and protection of minors", by prohibiting advertising based on personal data, designing recommender systems to minimize risks for children and demonstrating this to the European Commission via a risk assessment, and not use sensitive personal data such as race, gender and religion to target advertising. [252] Violators could face a complete
ban in Europe or fines of up to 6% of global sales. Such content moderation requires extensive investment by platform providers. [253] Enforcement resources may not be sufficient to ensure compliance. [254] The DSA allows a country to require information to be deleted that is illegal only in that jurisdiction. According to Patrick Breyer from the
German Pirate Party, a problem could arise from the Hungarian government requesting a video to be deleted that is critical of Victor Orban, as he foresaw the potential for such determinations to be applied EU-wide.[253] Similar to a carbon
tax negative social effects could be compensated for by a financial levy on the platforms, [257] Assuming that the tax did not deter the actions that produced the externalities, the revenue raised could be used to address them. However, consensus has vet to emerge on how to measure or mitigate the harms, nor to craft a tax. Another proposal is to
invoke competition law. [258] The idea is to restrict the platforms' market power by controlling mergers ex ante and tightening the law. This would be achieved through a supranational enforcement mechanism and the deterrent effect of high fines. In a 2024 opinion piece, Megan Moreno and Jenny Radesky, professors of pediatrics, wrote about the
need for "nuanced" policy.[259] They regarded access which is contingent upon parental consent as harmful. They commented that a focus on increasing age restrictions "may serve to distract from making sure platforms are following guidelines and best practices for all ages".[260]In June 2024, US Surgeon General Vivek Murthy called for social
media platforms to contain a warning about the impact they have on the mental health of young people. [261] The business model of most social media platforms is based on selling slots to advertisers. Platforms provide access to data about each user, which allows them to deliver ads that are individually relevant to them. This strongly incents
controversy. Criticisms include platform capabilities, content moderation and reliability,[263] impact on concentration, mental health,[264] content ownership, and the meaning of interactions, exual predation, particularly of children, and child
pornography.[266][267]In 2007 Andrew Keen wrote, "Out of this anarchy, it suddenly became clear that what was governing the infinite monkeys now inputting away on the Internet was the law of digital Darwinism, the survival of the loudest and most opinionated. Under these rules, the only way to intellectually prevail is by infinite filibustering.
[268]See also: The Disinformation ProjectSocial media has become a regular source of news and information. A 2021 Pew Research Center poll reported roughly 70% of users regularly get news from social media,[4] despite the presence of fake news and misinformation. Platforms typically do not take responsibility for content accuracy, and many do
not vet content at all, although in some cases, content the platform finds problematic is deleted or access to it is reduced. [269][270][271] Content distribution algorithms otherwise typically ignore substance, responding instead to the contents' virality. In 2018, researchers reported that fake news spread almost 70% faster than truthful news on X.[7]
Social media bots on social media increase the reach of both true and false content and if wielded by bad actors misinformation can reach many more users. [10] Some platforms attempt to discover and block bots, with limited success. [11] Fake news seems to receive more user engagement, possibly because it is relatively novel, engaging users'
curiosity and increasing spread.[26] Fake news often propagates in the immediate aftermath of an event, before conventional media are prepared to publish.[21][17]This section is an excerpt from Social media in order to extract actionable
patterns, form conclusions about users, and act upon the information. Mining supports targeting advertising to users or academic research. The term is an analogy to the process of mining sifts through social media data in order to discern
 patterns and trends about matters such as social media usage, online behaviour, content sharing, connections between individuals, buying behaviour. These patterns and trends are of interest to companies, governments and not-for-profit organizations, as such organizations can use the analyses for tasks such as design strategies, introduce programs
products, processes or services. Social media mining uses concepts from computer science, data mining, machine learning, and statistics. It attempts to formally represent, measure and model patterns from social media data. [272] In
the 2010s, major corporations, governments and not-for-profit organizations began mining to learn about customers, clients and others. Platforms such as Google, Facebook (partnered with Datalogix and BlueKai) conduct mining to target users with advertising. [273] Scientists and machine learning researchers extract insights and design product
features. [274] Users may not understand how platforms use their data. [275] Users tend to click through Terms of Use agreements without reading the 2016 United States presidential election, Facebook allowed Cambridge Analytica, a political
consulting firm linked to the Trump campaign, to analyze the data of an estimated 87million Facebook users to profile voters, creating controversy when this was revealed. [276] Further information: Social media activismMalcolm Gladwell considers the role of social media activism Malcolm Gladwell considers the role of social media activism Malcolm Gladwell considers the role of social media activism Malcolm Gladwell considers the role of social media activism Malcolm Gladwell considers the role of social media activism Malcolm Gladwell considers the role of social media activism Malcolm Gladwell considers the role of social media activism Malcolm Gladwell considers the role of social media activism Malcolm Gladwell considers the role of social media activism Malcolm Gladwell considers the role of social media activism Malcolm Gladwell considers the role of social media activism Malcolm Gladwell considers the role of social media activism Malcolm Gladwell considers the role of social media activism Malcolm Gladwell considers the role of social media activism Malcolm Gladwell considers the role of social media activism Malcolm Gladwell considers the role of social media activism Malcolm Gladwell considers the role of social media activism Malcolm Gladwell considers the role of social media activism Malcolm Gladwell considers the role of social media activism Malcolm Gladwell considers the role of social media activism Malcolm Gladwell considers the role of social media activism Malcolm Gladwell considers the role of social media activism Malcolm Gladwell considers the role of social media activism Malcolm Gladwell considers the role of social media activism Mal
media makes it easier for activists to express themselves, that expression likely has no impact beyond social media. What he called "high-risk activism" involves strong relationships, coordination, commitment, high risks, and sacrifice. [277] Gladwell claimed that social media are built around weak ties and argues that "social networks are effective at
increasing participation by lessening the level of motivation that participation requires."[277] According to him, "Facebook activism succeeds not by motivating people to make a real sacrifice, but by motivating them to do the things that people do when they are not motivated enough to make a real sacrifice."[277]Disputing Gladwell's theory, a 2018
survey reported that people who are politically expressive on social media are more likely to participate in offline political activity. [278] Social media content is generated by users. However, content ownership is defined by the Terms of Service to which users agree. Platforms control access to the content, and may make it available to third parties.
[279]Although platform's terms differ, generally they all give permission to utilize users' copyrighted works at the platform's discretion. [280]After its acquisition by Facebook in 2012, Instagram revealed it intended to use content in ads without seeking permission from or paying its users. [281][282] It then reversed these changes, with then-CEO
 Kevin Systrom promising to update the terms of service.[283][284]Main article: Privacy concerns with social networking servicesPrivacy rights advocates warn users about the collection of their personal data. Information is captured without the user's knowing consent. Data may be applied to law enforcement or other governmental purposes.[285]
[279] Information may be offered for third party use. Young people are prone to sharing personal information that can attract predators. [286] While social media users claim to want to keep their data private, their behavior does not reflect that concern, as many users expose significant personal data on their profiles. In addition, platforms collect data
on user behaviors that are not part of their personal profiles. This data is made available to third parties for purposes that include targeted advertising. [287] A 2014 Pew Research Center survey reported that 91% of Americans "agree" or "strongly agree" that people have lost control over how personal information is collected and used. Some 80% of
social media users said they were concerned about advertisers and businesses accessing the data they share on social media platforms, and 64% said the government should do more to regulate advertisers and businesses accessing the data they share on social media platforms, and 64% said the government should do more to regulate advertisers and businesses accessing the data they share on social media platforms, and 64% said the government should do more to regulate advertisers.
military, Coast Guard and other government agencies that identified "the potential risk associated with using the TikTok app and directs appropriate action for employees to take in order to safeguard their personal information." [290] As a result, the military, Coast Guard, Transportation Security Administration, and Department of Homeland Security
banned the installation and use of TikTok on government devices. [291] In 2020 The US government attempted to ban TikTok and WeChat from the States over national security concerns. However, a federal court blocked the move. [292] In 2024, the US Congress passed a law directing TikTok on government devices. [291] In 2020 The US government attempted to ban TikTok and WeChat from the States over national security concerns.
the service banned from operating in the US. The company sued, challenging the constitutionality of the ban. [293] The ban was upheld as constitutional. [citation needed] Main article: Problematic social media use See also: Digital media use See also: Di
disorder (IAD), also known as problematic internet use, or pathological internet use, or pathological internet addiction disorder, [294] with case studies highlighting
students whose academic performance declines as they spend more time online. [295] Some experience health consequences from loss of sleep [296] as they stay up to continue scrolling, chatting, and gaming. [297] Excessive Internet use is not recognized as a disorder by the American Psychiatric Association's DSM-5 or the World Health Organization's
ICD-11.[298] However, gaming disorder appears in the ICD-11.[299] Controversy around the diagnosis includes whether the disorder is a separate clinical entity, or a manifestation of underlying psychiatric disorder is a separate clinical entity, or a manifestation of underlying psychiatric disorder is a separate clinical entity, or a manifestation of underlying psychiatric disorder is a separate clinical entity, or a manifestation of underlying psychiatric disorder is a separate clinical entity, or a manifestation of underlying psychiatric disorder is a separate clinical entity, or a manifestation of underlying psychiatric disorder is a separate clinical entity, or a manifestation of underlying psychiatric disorder is a separate clinical entity, or a manifestation of underlying psychiatric disorder is a separate clinical entity, or a manifestation of underlying psychiatric disorder is a separate clinical entity, or a manifestation of underlying psychiatric disorder is a separate clinical entity, or a manifestation of underlying psychiatric disorder is a separate clinical entity of underlying psychiatric disorder is a separate clinical entity of underlying psychiatric disorder is a separate clinical entity of underlying psychiatric disorder is a separate clinical entity of underlying psychiatric disorder is a separate clinical entity of underlying psychiatric disorder is a separate clinical entity of underlying psychiatric disorder is a separate clinical entity of underlying psychiatric disorder is a separate clinical entity of underlying psychiatric disorder is a separate clinical entity of underlying psychiatric disorder is a separate clinical entity of underlying psychiatric disorder is a separate clinical entity of underlying psychiatric disorder is a separate clinical entity of underlying psychiatric disorder is a separate clinical entity of underlying psychiatric disorder is a separate entity of underlying psychiatric disorder is a separate entity of underlying psychiatric disorder is a separate entity of u
theoretical models have been developed and employed for many years in order to better explain predisposing factors to this disorder. Models such as the Interaction of Person-Affect-Cognition-Execution model, have
been developed more recently and are starting to be applied in more clinical studies. [300] In 2011 the term "Facebook addiction disorder" (FAD) emerged. [301] FAD is characterized by compulsive use of Facebook. A 2017 study investigated a correlation between excessive use and narcissism, reporting "FAD was significantly positively related to the
personality trait narcissism and to negative mental health variables (depression, anxiety, and stress symptoms)".[302][303]In 2020, the documentary The Social media's pursuit of addictive use. For example, when a user has not visited
 Facebook for some time, the platform varies its notifications, attempting to lure them back. It also raises concerns about the correlation between social media use and child and teen suicidality. [304] Additionally in 2020, studies have shown that there has been an increase in the prevalence of IAD since the COVID-19 pandemic. [305] Studies
highlighting the possible relationship between COVID-19 and IAD have looked at how forced isolation and its associated stress may help reduce social media use. [306] For some users, changes in web browsing can be helpful in compensating for self-
regulatory problems. For instance, a study involving 157 online learners on massive open online courses examined the impact of such an intervention. The study reported that providing support in self-regulation was associated with a reduction in time spent online, particularly on entertainment. [307] Research suggests that social media platforms
trigger a cycle of compulsive behavior, which reinforces addictive patterns and makes it harder for individuals to break the cycle. [308] Various lawsuits have been brought regarding social media addiction, such as the Multi-District Litigation alleging harms caused by social media addiction on young users. [309] See also: Social media in
educationWhether to restrict the use of phones and social media among young people has been debated since smartphones became ubiquitous.[310] A study of Americans aged 1215, reported that teenagers who used social media over three hours/day doubled their risk of negative mental health outcomes, including depression and anxiety.[311]
Platforms have not tuned their algorithms to prevent young people from viewing inappropriate content. A 2023 study of Australian youth reported that 57% had seen disturbingly violent content, while nearly half had regular exposure to sexual images.[312] Further, youth are prone to misuse social media for cyberbullying.[313]As result, phones have
been banned from some schools, and some schools in the US have blocked social media at a young age brings with it many problems. For example, according to a survey conducted
by Ofcom, the media regulator in the UK, 22% of children aged 8-17 lie about being over 18 on social media. A series of measures have begun to be taken across Europe to prevent the risks caused by such
problems. The countries that have taken concrete steps in this regard are Norway and France. Since June 2023, France has started requiring social media platforms to verify the ages of their users and to obtain parental consent for those under the age of 15. In Norway, there is a minimum age requirement of 13 to access social media. The Online
Safety Law in the UK has given social media platforms until mid-2025 to strengthen their age verification systems.[315]Main articles: Internet censorship in IndiaSocial media often features in political struggles. In some countries, Internet police or secret police monitor or control citizens' use of
social media. For example, in 2013 some social media was banned in Turkey after the Taksim Gezi Park protests. Both X and YouTube were temporarily suspended in the country by a court's decision. A law granted immunity to Telecommunications Directorate (TB) personnel. The TB was also given the authority to block access to specific websites
without a court order.[316] Yet TB's 2014 blocking of X was ruled by the constitutional court to violate free speech.[317]These paragraphs are an excerpt from Internet censorship in the United States.
The First Amendment of the United States Constitution protects freedom of speech and expression against federal, state, and local government censorship. Free speech protections allow little government censorship by a complex set of legally binding and privately
mediated mechanisms.[318]Gambling, cyber security, and the dangers to children who frequent social media are important ongoing debates. Significant public resistance to proposed content restriction policies has prevented measures used in some other countries from taking hold in the US.[318]Many government-mandated attempts to regulate
content have been barred, often after lengthy legal battles.[319] However, the government has exerted pressure indirectly. With the exception of child pornography, content restrictions tend to rely on platforms to remove/suppress content, following state encouragement or the threat of legal action.[320][318]Intellectual property protections yielded a
system that predictably removes infringing materials.[318][321] The US also seizes domains and computers, at times without notification.[322][323][324][325]While the dominant social media platforms are not interoperable, open source protocols such as ActivityPub have been adopted by platforms such as Mastodon, GNU social, Diaspora, and
Friendica. They operate as a loose federation of mostly volunteer-operated servers, called the Fediverse. However, in 2019, Mastodon blocked Gab from connecting to it, claiming that it spread violent, right-wing extremism.[326]In December 2019, X CEO Jack Dorsey advocated an "open and decentralized standard for social media". He joined Bluesky
to bring it to reality.[327]See also: Twitter suspensionsThese paragraphs are an excerpt from Deplatforming, is a boycott on an individual or group by removing the platforms used to share their information or ideas.[328] The term is commonly associated with social media. As early as 2015, platforms used to share their information or ideas.[328] The term is commonly associated with social media. As early as 2015, platforms used to share their information or ideas.
such as Reddit began to enforce selective bans based, for example, on terms of service that prohibit "hate speech".[329] A famous example of deplatforming was Twitter's ban of then-US President Donald Trump shortly after the January 6 United States Capitol attack.[330]See also: Democratic backsliding and The Social DilemmaA number of
commentators and experts have argued that social media companies have incentives that to maximize user engagement with sensational, emotive and controversial material that discourages a healthy discourse that democracies depend on.[331] Zack Beauchamp of Vox Media calls it an authoritarian medium because of how it is incentivized to stir up
hate and division that benefits aspiring autocrats.[332] The Economist describes social media as vulnerable to manipulation by autocrats.[333] Informed dialogue, a shared sense of reality, mutual consent and participation can all suffer due to the business model of social media.[334] Political polarization can be one byproduct.[335][336][337] This can
have implications for the likelihood of political violence. [338][214] Siva Vaidhyanathan argues for a range of solutions including privacy protections and enforcing anti-trust laws. [201] Andrew Leonard describes Pol. is as one possible solution to the divisiveness of traditional discourse on social media that has damaged democracies, citing the use of its
algorithm to instead prioritize finding consensus. [339][340]Main article: Terrorism and social media According to LikeWar: The Weaponization of Social Media, [341] the use of effective social media by ISIS and
Al-Qaeda has been used to influence public opinion where it operates and gain the attention of sympathizers. Social media platforms have endured backlash for allowing this content. Extreme nationalist groups, and more
prominently, US right-wing extremists have used similar online tactics. As many traditional social media platforms became popular among right-wing extremists to carry out planning and communication including of events; these application became known as "Alt-tech". Platforms such as Telegram, Parler, and
Gab were used during the January 6 United States Capitol attack, to coordinate attacks. [344] Members shared tips on how to avoid law enforcement and their plans on carrying out their objectives; some users called for killing law enforcement and their plans on carrying out their objectives; some users called for killing law enforcement and their plans on carrying out their objectives; some users called for killing law enforcement and their plans on carrying out their objectives; some users called for killing law enforcement and their plans on carrying out their objectives; some users called for killing law enforcement and their plans on carrying out their objectives; some users called for killing law enforcement and their plans on carrying out their objectives; some users called for killing law enforcement and their plans on carrying out their objectives; some users called for killing law enforcement and their plans on carrying out their objectives; some users called for killing law enforcement and their plans on carrying out their objectives; some users called for killing law enforcement and their plans on carrying out their objectives; some users called for killing law enforcement and their plans on carrying out their objectives; some users called for killing law enforcement and their plans of their objectives; some users called for killing law enforcement and their plans of their objectives; some users called for killing law enforcement and their plans of their objectives; some users called for killing law enforcement and their plans of their objectives; some users called for killing law enforcement and their plans of their objectives; some users called for killing law enforcement and their plans of their objectives; some users called for killing law enforcement and their objectives; some users called for killing law enforcement and their objectives; some users called for killing law enforcement and their objectives; some users called for killing law enforcement and their objectives; some users called for ki
unless the user deletes it. After a user dies, unless the platform is notified, their content remains. [346] Each platform has created guidelines for this situation. [347] In most cases on social media, the platform require a next-of-kin to prove that the user is deceased, and give them the option of closing the account or maintaining it in a 'legacy'
status. Guidelines for users who have died, by platform [347] Platform Guideline (any other person, regardless of the relationship. Facebook Users have the account to any other person, regardless of the relationship. Facebook Users have the account to any other person, regardless of the relationship.
Users can identify a 'legacy contact' who would take over the account after. Instagram[349]Users can have the account memorialized or deleted with proof of death. used social media worldwidea number projected to increase to almost six billion by 2027.78% of consumers say theyre willing to buy from a company after having a positive experience with them on social media.91% of executives plan to increase social media marketing budgets in the next three years. Free to use image sourced from UnsplashThese
are just a few of the reasons why all kinds of businesses, from car dealerships to sellers of online communication technologies, are keen to invest in social media marketing. While the demand for services is growing, however, the industry is also becoming fiercely competitive. Persuading your prospective client that you know how to build a high-
converting social media marketing funnel or organize their social media calendar isnt enough; if you want to stand out among your competitors, you need to convince them you can help to achieve their specific goals. A strategic social media presentation is where you can showcase your skills and tell your client what value you can deliver for their
business. Are you looking for tips on how to pitch to a prospect? Then read this brief guide to find out what makes the best possible presentation is key to delivering high-quality work. Make sure you base your presentation on thorough research. Learn as much as you can about
your client, from their brand to their industry, products, customers, and competitors. Gathering information about your prospect can also protect you against a potentially bad client, as you may be able to spot certain red flags at this stage. This could involve: Getting to know your client Learning as much as you can about your client will enable you to
build a tailor-made strategy for them. You can research their website, social media profiles, product catalogs, and customer reviews. Find out about their brand, industry, and business, as well as their values, objectives, needs, and problems. Its helpful to establish who is in charge of marketing in the company, who the members of the marketing team
are, and what their budget is. Equipped with this knowledge, your strategy and the process of implementation. For example, you might suggest your client explores the application of integrations to streamline their approach. Finding out about their audienceDeveloping a successful strategy for a business requires knowing its
customers and social media audience. At the very least, its useful to understand which platforms they energy energy energy energy to understand which platforms they currently have on their social channels to see how these are performing. Knowing
these things will allow you to propose well-informed solutions and strategies. For example, you can help your client find ways to expand their competitors will make your client stand out. To achieve this, you need to know
about their competitors social media presences and strategies, as well as the products or services they offer. Only then can you design a campaign that will differentiate your client and emphasize their advantages. For example, if your client is a new online communications technology provider, check out industry rankings and comparison sites to find
out what other competitors to eVoice have to offer, and then design your strategy around the things that make your client special. Perhaps they can offer their customers a useful feature free of charge? If so, this might become the central theme of your strategy around the things that make your client special. Perhaps they can offer their customers a useful feature free of charge? If so, this might become the central theme of your strategy around the things that make your client special.
communicationThe information you gather at the research stage will help you develop a strategy based on a personalized approach. Your presentation should reflect this. Use it to persuade your client that youre there to help them solve their goals and have the experience and resources to do it. To do this: Focus on the
clientImage sourced from semrush.comA 2019 Semrush study showed personalization is the most important factor determining the success of a sales agency pitch and matters more than the pricing strategy, value proposition, or relevant stats and benchmarks. So, its definitely a good idea to tailor your presentation to your specific client! Let them
know youre aware of their needs, challenges, and preferences. Its also useful to specify what youl need from them to make your previous example, a new online telecommunications technology provider may be
keen to learn what you achieved for a virtual call center solutions business previously, but less interested in your experience and expertise and demonstrating your track record of successful campaigns, you can establish credibility by telling clients more about
yourself and how you work. A Stanford study showed people tend to remember stories rather than facts and figures. Telling a prospective client about your team and their respective roles or describing the business process (i.e. how you work
with your clients) can be helpful too. Foster good communication Be open to answering your clients questions after the presentation and leave your contact details so they can reach you with any queries at a later stage (letting them call you on a virtual number free of charge may encourage them to get in touch). Its good practice to send a thank you
email after the presentation in which you also ask for feedback. Planning, attractive design, and delivery fine business presentations. Youre probably already familiar with the principles of designing and delivery fine business presentation, and there are plenty
of resources available to consult for inspiration and guidance. Nonetheless, below youll find a brief recap of the basics to refresh your memory. Structure your information and present it in a logical order, so your audience leaves the
room having a clear idea of what you wanted to say. Make the content informative but not overloaded with facts and figures. There are various approaches to structuring your presentation. One helpful piece of advice is to follow the 10/20/30 presentation rule, which states presentation should have 10 slides, last no more than 20 minutes, and have a
font no smaller than 30 points. You may want to modify this model or adopt a different one that suits your purposes better. Free to use image sourced from UnsplashMake it visually attractive American psychologist Jerome Bruner popularized the theory that people only remember 10 percent of what they hear, 30 percent of what they read, and about
80 percent of what they see and do. This means the visual side of your presentation is really important. Visualizing information, such as numerical data and stats, can help your audience understand and remember the content. Visual elements can also make your presentation more aesthetically pleasing. After all, you are showcasing your social media
marketing skills! Looking at your presentation, your client should believe you can turn any content (be it a sample bookkeeping business proposal or a perfume) into something exciting. Explore online resources available to help you achieve the best results with the presentation design and visual elements. You
There, youll find articles on the latest trends in slide design, valuable PowerPoint add-ins, and a lot more. Showcase your skills like a proAs youre preparing a social media presentation, you will need to give your client a preview of how you can transform their social media presentation, you will need to give your client a preview of how you can transform their social media presentation, you will need to give your client a preview of how you can transform their social media presentation.
agencies still implement, though it appears less professional and less attractive than some of the innovative options available today. Instead, you can give your prospect the most accurate idea of what you can deliver for them. Moreover, it
allows you to modify posts as and when needed. The tool will help you plan and schedule a social media campaign using predefined time slots. Free to use image sourced from Unsplash Ensure a smooth delivery Delivery is both about your presenting skills and the format of your presentation. In addition to employing top-level public speaking to engage
your audience, you need to choose the best presentation environment and file type. A good way to catch the audiences attention early on is to tell a story or quote astonishing statistics. Then, keeping them engaged depends as much on your speaking skills as on attractive visuals. Remember that choosing your presentation environment and format is an
 important decisionwill you use PowerPoint, Keynote, or Google Slides? Will you rely on templates or prepare the presentation yourself using during the presentation and that everything is working smoothly. Virtual presentations?
Youve got it covered! Following the expansion of remote working we saw in recent years, virtual presentations have adopted them as the delivery method of choice. So, its definitely good to have a good grasp of the art of preparing and delivering presentations remotely. When there is no direct face-to-face
interaction between the presenter and the audience, the task of captivating and sustaining the listeners attention falls largely on the material. This makes visual and technical aspects of a virtual presentation even more crucial. While presentation even more crucial. While presentation even more crucial aspects of a virtual presentation even more crucial.
point out that a good virtual presentation responds to the challenges of the virtual environment, such as multiple distractions, the distance between the speaker and the right solutions and approach. Use dynamic elements of the virtual environment, such as multiple distractions, the distance between the speaker and the right solutions and approach. Use dynamic elements of the virtual environment, such as multiple distractions, the distance between the speaker and the right solutions and approach. Use dynamic elements of the virtual environment, such as multiple distractions, the distance between the speaker and the right solutions and approach. Use dynamic elements of the virtual environment, such as multiple distance between the speaker and the right solutions are distance between the speaker and the right solutions are distance between the speaker and the right solutions are distance between the speaker and the right solutions are distance between the speaker and the right solutions are distance between the speaker and the right solutions are distance between the speaker and the right solutions are distance between the speaker and the right solutions are distance between the speaker and the right solutions are distance between the right solution
important than ever. Its a good idea to include dynamic elements, such as animations and videos, though you need to remember not to overload the audience. When it comes to text, slides should ideally contain one or two points expressed in short and punchy sentences. Using an AI slide maker will automate design elements and suggest visually
appealing layouts, ensuring that your slides are concise and visually engaging. Complex ideas and data can be conveyed in infographics and visualizations, while the presentation software, check out alternatives to PowerPoint, and make your tools
more powerful by reaching for interesting add-ins. Free to use image sourced from PexelsInteract with your audienceThe listeners attention can also be captivated with creative elements, such as polls and quizzes. Though you dont see them face to face, you can still maintain eye contact using a webcam, and emphasize some
points with gestures. An interactive presentation as it will be more engaging and be more memorable to your audience in the long-term. You may not be able to eliminate technical issues on the viewers side, however, you should ensure a perfectly smooth delivery on your end. Test your equipment and rehearse the presentation to avoid any unpleasant
surprises. Sending a copy of your presentation to your audience after the event will give those who may have experienced technical issues to familiarize themselves with it and create an opportunity for a follow-up interaction. Time to get started this brief guide should have given you a general idea of what makes a good social media strategy
presentation and how to prepare one. Now, you can look for more material and explore each point in-depth, or you can start working on your research, plan your slides well, make them visually pleasing, take care of technicalities
and above all focus on your client and social media productivity. If you fail to address their needs, you wont be successful, no matter how visually appealing or technically advanced your presentation may be. Good luck!
