9N (1941) Steel grille with vertical spokes & solid center bar Kingpin grease fitting move to rear Lube line is provided from filter housing to governor Ignition key is moved to steering column 3-spoke wheel (spokes covered) Left & right brake pedals now different Riveted rear hubs replace smooth ones Heavier-duty lift cylinder & spring Chrome trim
on several parts9N (1942) Transition from 9N to 2N models - 2N appeared as 9N as parts were used up on assembly line 2N (1942) "2N" appears in lower edge of Ford-script badge Grille has slotted center bar External fasteners appear on lower side panels - mid-year Non-electrical (magneto) system & steel wheels Valve rotators used in engine
Steering wheel has exposed metal rod spokes Vertical fender bold holes cast into rear axle housing, no longer "solid" 10.00x28 rear tires now standard Chrome trim eliminated Model and serial numbers for all Ford tractors were hand-stamped into the cast iron engine or transmission housing. The exact location changed and is described below for
 each model. Hand-stamped means the numbers may be difficult to read if the hammer didn't get a really good whack on each character. The N-Tractors used an odd font with lowercase "b" substituted for "1". The hand-stamped engine serial numbers for 9N,2N,8N tractors only indicate
approximately when a tractor was built. These hand-stamped numbers were the last identifying mark added before final assembly of a tractor. There are no identifying marks to indicate the exact date a tractor was assembled. Cast parts were have date codes that the factory used to make sure parts were properly cured before being machined. Fresh
   "green" castings are brittle and will break tools or the casting if machine work is attempted too soon. Casting date codes will have raised or recessed numbers and letters on a tag that was attached to the mold with screws. The tag and screws are visible on the casting. Date codes varied but the most common code found on the 9N, 2N, 8N tractors is
 a letter indicating the month A=Jan, B=Feb, C=MAR... The next two numbers indicates year. The date code F262 indicates year. The date code F262 indicates year then pulled from the
holding area to be fully machined, cleaned, and then set in another holding area. Machined blocks were then taken to the engine assembly area where they were fully assembled and then placed in another holding area. Assembled engines then went to the QC Test Area. When each engine passed QC Inspection/Testing, the hand stamped serial
 number was applied, and the engine was placed in another holding area. What all that means is the casting date code on any part must be at least 30 days prior to the part being machined. In the case of an engine block, final assembly and testing had to take place before the hand-stamped serial number was added. Tractor assembly would probably
 have been several days or longer after the engine passed QC and was stamped with a serial number. It is very common for one of these tractors to have parts with casting date codes that don't exactly match. The backlog in holding areas for different parts could vary significantly. Engines were pulled for final assembly on the line. Serial numbers were
 stamped in sequential order after passing QC, but they were not maintained in any particular sequential order for final assembly. For later model/serial numbers were moved to the transmission housing) the hand-stamped model/serial number code was added as the tractors were assembled, so the model/serial
numbers for those tractors do indicate the actual date the tractor was assembled. I have no idea exactly when the hand-stamped serial numbers became "tractors thru the early thousand
series and 3-cylinder models thru 1975. My Ford 3000 was a 3-cylinder version built after 1965. Refer to tractordata.com to find photos and information about other years, makes, and models of farm and industrial tractors not covered here. Ford 9N The Ford 9N Tractor went from handhake to production in just a few months. The very aggressive
schedule resulted in some differences between the first models. A cast aluminum hood was used because the stamped steel hood could not be manufactured in time. Other items included parts borrowed from Ford cars and trucks. Serial numbers were stamped on the upper/left/rear corner of the engine block above the starter. All
 numbers start and end with a star and have the prefix "9N" to indicate 1939 model. Built from June 1939 - 1942 Serial Numbers - 1939 9N1 to 9N98934 to 9N99046 Tractor production was halted on Feb 10, 1942 by order of the US War Production Board (WPB). President
 Roosevelt established the WPB in January 1942 by Executive Order 9024. The WPB consolidated federal agencies to more efficiently direct the conversion of U.S. industrial products such as gasoline, oils, metals, rubber, plastics, and paper. The
 WPB was replaced by the Civilian Production Administration shortly after the defeat of Japan in 1945. Ford 2N Mr. Roger Kyes (president of the Ferguson-Sherman Corporation) came up with the idea of producing a tractor without rubber tires, battery, or starter. The Model 2N was born but production of the stripped-down tractors did not start until
October 1942. Few 2N tractors found today will look any different from the 9N tractors. The stripped-down steel-wheel version was produced in very small quantities for just a few months before Ford was allowed to return to the pre-war specifications for tractors. A steel-wheel version photo is provided further down this page. Some of the obvious
factory changes to the 2N tractors included; changing several previously chromed items to painted and changing from I-Beam to Tube-type Radius rods part way thru the 1944 production year. Few changes were made from 1945 to 1947. Ford engineers were busy working on the new 8N tractor design. Serial numbers were stamped on the
upper/left/rear corner of the engine block above the starter. All numbers start and end with a star and still have the prefix "9N" to indicate 1939 model. Built from 1942 to 9N126574 1944 9N126575 to 9N170017 1945 9N170018 to 9N198766 1946
 9N198767 to 9N258539 1947 9N258540 to 9N306221 Ford 8N The most obvious change for the new "Red Belly" paint scheme. Mechanical improvements included a 4-Speed Transmission and added Position Control to the 3-Point Lift. Serial numbers were stamped on the upper/left/rear corner of the engine block above the
 starter. All numbers have the prefix "8N" to indicate 1948 model. The stars changed to diamonds in 1951 when the engines went to thick-wall cast iron sleeves rather than steel sleeves used previously. Built from July 1947 - 1952 Serial Numbers - (Note Change To 8N Prefix) 1947 8N1 to 8N37907 1948 8N37908 to 8N141369 1949 8N141370 to
8N245636 1950 8N245637 to 8N343592 1951 8N343593 to 8N442034 1952 8N442035 to 8N524076 The new model NAA tractors built starting in 1952, for the 1953 model year, got a special "Golden Jublee" hood medallion to celebrate Ford's 50th anniversary. The big change for this model was the new overhead valve "Red Tiger" engine. Serial
numbers were stamped on the upper/left/front corner of the engine block until 22238. After that serial numbers were stamped on the left/front/side of the transmission housing. New for the NAA models was stamping zeros so all serial numbers were stamped on the left/front/side of the transmission housing. New for the NAA models was stamping zeros so all serial numbers were stamped on the left/front/side of the transmission housing.
Change To NAA Prefix) 1952NAA00001toNAA04929 1953NAA04930toNAA77474 1954NAA77475toNAA128965 Ford Hundred Series - 600,700,800,900 For the new "Hundred" series Ford began to offer many more options than previous models. There were now row-crop versions. two different size engines, different transmissions, with various
clutch, and PTO options to choose from. More tractor models and options does create a problem. Parts can be much harder to find and more expensive than for earlier tractors built when only one model was available for several years. Model and serial numbers start and
end with diamond symbols. Built from 1954 - 1957 Serial Numbers - 19541to10614 195510615to77270 195677271to116368 and Higher Starting with the Hundred series in 1954, Ford began using a model number prefix to indicate options such as engine size and transmission type. If you have your model and serial numbers written down,
GoTo Decode Table. Ford 01 Series - "Workmaster" 501,601,701, and "Powermaster" 801,901 Ford continued to offer even more models and options with the '01 series. Power steering and diesel engines were now available. The Workmaster tractors had an all red hood and grille. "Powermaster" tractors had gray on the sides of the hood. Model and
 serial numbers were stamped on the left/front/top of the transmission housing. Built from 1957 - 1962 Serial Numbers - 19571001to11996 1958112to105942 1960105943to131426 If you have your model and serial numbers written down, GoTo Decode Table. Ford Thousand Series - Early Models A few thousand series tractors
were built as light and heavy industrial models beginning late in 1960. The light industrial models were very similar in appearance to the '01 series. Model and serial numbers were stamped on the left/front/top of the transmission housing. Built from late 1960 - 1963 Serial Numbers - 1961131427to155530 1962155531 and Higher Ford Thousand
Series - 2000, 4000, 6000 In 1962 Ford introduced the thousand series utility tractors. The hood/grille was changed to the new corporate blue and light-gray colors. A few industrial models were red and buff color. Model and Serial numbers are
  stamped on left/front/top corner of the transmission housing. Built from 1962 - 1964 Serial Numbers - 19621001to11948 196311949to38930 196438931andHigher If you have your model and serial numbers written down, GoTo Decode Table. Ford Thousand Series - 3-Cylinder Engines The Thousand Series continued until 1975. The big change for
