architectural adaptations, related to the Greco-Egyptian period of Ptolemaic Egypt.". The scholars also outline that, "The protracted walkway and courtyard distinguishing the ticket enclosure from the lobby was adapted from the famous Grauman's Egyptian Theatre in Hollywood." Remember! This is just a sample You can get your custom paper by
one of our expert writers The Arzner/Morgan Residence. The Arzner/Morgan Residence feature includes a second-floor Doric-colonaded loggia. The pervading rectangular shape of the building resembles the ancient Greek temple designs. One striking aspect
on the Arzner/Morgan Residence related to the typical Greek architectural colonnaded portico of columns which surrounds the building. Arzner/ Morgan Residence structure thus closely resembles the structures of the Temple of Athena Nike and the famous Parthenon. William Rostoker, (1981) notes, "In Ancient Greek building designs some designs are the structures of the Temple of Athena Nike and the famous Parthenon. William Rostoker, (1981) notes, "In Ancient Greek building designs some designs are the structures of the Temple of Athena Nike and the famous Parthenon. William Rostoker, (1981) notes, "In Ancient Greek building designs some designs are the structures of the Temple of Athena Nike and the famous Parthenon. William Rostoker, (1981) notes, "In Ancient Greek building designs some designs are the structures of the Temple of Athena Nike and the famous Parthenon. William Rostoker, (1981) notes, "In Ancient Greek building designs are the structures of the Temple of Athena Nike and the famous Parthenon. William Rostoker, (1981) notes, "In Ancient Greek building designs are the structures of the Temple of Athena Nike and the famous Parthenon. William Rostoker, (1981) notes, "In Ancient Greek building designs are the structures of the Temple of Athena Nike and the structures of the Temple of Athena Nike and the structures of the Temple of Athena Nike and the structures of the S
constituted projecting head of columns making up the entrance (known as the prostyle) while others were complement by what called the 'pronaos' façade of columns protracting to the 'cella.' There are striking similarities in the column structures of the two building designs, the Arzner/Morgan Residence and the famous Parthenon displayed
below. The picture shows the façade of the famous Parthenon. The façade is made of the projecting colonnaded portico of columns that surround the building. The Parthenon foundation was made of the famous structure are known to be Iktinos and Kallikrates, Vitruvius, and
Karpion. The Parthenon was dedicated to the goddess again demonstrating the acute religious inclination of the Greece. Francis D.K. Ching et al (2007) note, "The Temple was modeled in resemblance of the 'Doric order' marked by the hallmark eight columns at the front as well as seventeen other columns on the sides in tandem with designated ratio
of 9.4." According to the insights of the scholars, "This ratio was a salient design framework for the vertical and horizontal structuring of the building as well as other proportionalities of the design of the Arzner/ Morgan Residence has
overwhelming features of resemblance to the Parthenon design. The architecture must have relied closely of the ancient architecture is the legendary Greek Theater.
The Greek Theater which was erected in 1929 is modeled is unmistakable resemblance of the ancient Greek times were normally built on hillsides of the urban territory thresholds. Remarkable aspects of the Theater built on 1929 include the lack of a facade and seating arena design which is closely related to the
 interior designs of the ancient Greek theater. The Greek Theater built in 1929, rightfully named after its typical ancient Greek Theater built in 1929, rightfully named after its typical ancient Greek Theater.
Greet building structures is the amphitheater stage which closely typifies the ancient Greek temple. The theatre is structured as serene outdoor theatre in the scenic nature-environment setting. The striking feature about that location of the theatre is that it is nestled within the environs of typically hilltop setting which unmistakably resembles ancient
Greek theaters which were normally located around urban area hillsides. Like the olden times Greek theater the Legendary Los Angeles Theater is used as a venue for all kinds and creed while playing venue to numerous big names in the entrainment circles.  work. Explore More Contentresearch The ancient Greek philosophers have played a fundamental function in the formulation of, not only the western philosophers and other theorists today admit that ancient Greek philosophy has, for centuries now, shaped the entire western
 thought (Barnes 5). Get a custom research paper on Ancient Greek Philosophers: A Critical Evaluation of Their Impact on Modern Thought The ancient Greek philosophers are known to have dissociated themselves from a mythological approach to explaining the events of the universe, and embraced a rather holistic approach based on reason and
inquiry (Ancient Greek Philosophy para. 2). However, according to the article, it is imperative to note that neither reason nor the quest for evidence started with the ancient Greeks, but the pre-Socratic philosophers endeavored to identify a single underlying standard that could be used to explain the whole cosmos, allowing in the process great
progress in key areas of geometry, logic, and the sciences. This paper discusses the impact of ancient Greek philosophers' seminal works and ideas on modern thought. The western philosophers going by the name 'pre-
 Socratics' (Ancient Greek Philosophy para. 4). Other ancient Greek philosophers that indelibly left a mark, and continues to impact modern thought, include Socrates, Plato, Aristotle, Zeno of Citium, Epicurus, Pyrrho of Elis, among others. These, and other ancient philosophers, merited Greece to be referred as the birthplace of Western culture due to
the astounding advances and educated guesses made in a multi-disciplinary context (Knierim 1). Their speculations have productively anticipated findings of the 21st century science. Ancient Philosophers' Contributions to Modern ThoughtThe fact that there exist palpable and comprehensible parallels between ancient Greek philosophy and Modern
thought is undeniable. However, early Greeks perceived the world in a manner that one would today depict as holistic in that, disciplines such as science, religion, and philosophers continue to influence modern thought. Thate
(624-546 BC) is one such philosopher, whose proposition about right angles commenced what is today known as deductive science. According to Thales, "...a triangle inscribed in a semicircle has a right angle" (Knierim 3). 1 hour! The minimum time our certified writers need to deliver a 100% original paper This observation, though it may seem
simple and straightforward, continues to inform mathematicians in the 21st century, especially when it comes to Geometry. Deductive logic is still used in many disciplines to come up with well reasoned and accurate prepositions. Indeed, it was during Thales' era that the notion on how all forms of substances can be diminished to a few elements was
 advanced. Another main area where Greek philosophers have greatly influenced modern thought is in religion, especially in the interpretation and meaning of the human soul. The concept of the human soul (Guthrie 103). Leucippus and of the human soul (Guthrie 104).
 Democritus, formulators of the concept of atoms, believed that the soul is made of very movable spherical atoms. Other ancient philosophers were of the opinion that the soul was made up of gaseous or liquid matter. The weakness of these explanations notwithstanding, the attempts by these ancient philosophers to define the human soul facilitated
more contemporary and spiritual explanations to be proposed. Plato, for instance, argued that the soul is superior to the body, not mentioning the fact that it was the most important part of an individual (Barnes 23). The philosopher's perception about the soul had an immense sway on early Christian theologians, and continues to influence Christians
in the 21st century. The philosophical works of Aristotle, undoubtedly one of the most influential philosophers, has had great ramifications in most facets of modern life, including the field of education. It was Aristotle who first coined the concept that knowledge achieved through the senses remains invariably confused and polluted, and that the
 thoughtful soul that turns away from the events of the world can acquire 'true knowledge.' For the philosopher, "...all forms of education are explicitly or implicitly directed towards a human ideal" (UNESCO 2). Aristotle further went to presuppose that if the objective of man is one of his fundamental concerns, then it is only through education that he
can realize himself wholly. Also, the philosopher was of the opinion that individuals posses explicit natural abilities, but it is only through education, according to analysts, has lost none of its relevance in modern thought (UNESCO 9). His observations are indeed used to
inform educational policy and practice across civilizations to date. Remember! This is just a sample You can get your custom paper by one of our expert writers According to Long, "...in the modern world, Pythagoras is the foremost famous of early Greek philosophers" (66). His contributions to the discipline of mathematics are today still very much in
 use in our educational institutions, with other theories arising from his theorem developed to solve issues affecting the modern world. Although the Pythagoras theorem was not discovered by the philosopher, he is credited for proving and popularizing it, especially in the Greek world (Knierim 7). Many millennia has passed by ever since the theory was not discovered by the philosopher, he is credited for proving and popularizing it, especially in the Greek world (Knierim 7).
popularized, but Pythagoras still shines as one of the brightest philosophers of early Greek antiquity, and his theorem is often alluded to as the starting point of mathematics in western culture. Today, this theorem is often alluded to as the starting point of mathematics in western culture.
 studied in our educational institutions today. These facets, namely metaphysics, materialism, epistemology, empiricism, rationalism, ethics, among others, continue to influence modern thought, especially in social and political context (Boeree para. 12). The metaphysical question about what the world is made of still bothers contemporary
philosophers though it has its roots in ancient Greek philosophers. In the same vein, it is t
and religious orientations. The concepts are still studied today at a university level globally to enhance students' capacity to critically fundamental in the discipline of Physics, draws its origins from two ancient philosophers - Leucippus of Miletus and Democritus of
Abdera (Guthrie 57). These philosophers proposed that all matter is made up of minute, inseparable particles, otherwise known as atoms. The philosophy thinkers also held that, not only were atoms too small to be seen, changed, or destroyed, but were also wholly solid, lacking any internal structure and having an immeasurable array of shapes and
sizes (Infoplease para. 2). These concepts, though greatly reformulated and corrected, are still very much in use in the 21st century, and as such, it is only plausible to give credit to the ancient Greek philosophers. According to Gadamer & Palmer, "...the Greeks [ancient philosophers] taught us to be at home in the world without making the objects in
nature into things, how to be at home in a realm of social practices and institutions, [and] how to reflect on man's way of being in the world could have never being the same if the ancient Greek philosophers did not lay the groundwork for providing answers and explanations to complex
 situations and experiences bedeviling the world. Put another way, the ancient Greek philosophers can equally be credited for deciding the conduit of modern civilization in that, major contemporary concepts, knowledge
and viewpoints have been built upon the knowledge and conceptualizations derived from these wise men (Gadamer & Palmer 268). Get your first paper with 15% OFF Learn More ConclusionIt is clearly evident that ancient Greek philosophers have had a great influence on modern thought, not only on the specific disciplines as we know them today,
but also on our personal lives. It appears, therefore, that theirs was a period of enlightenment, whereby the philosophers were imparted with knowledge previously unheard of (Barnes 8). A wide allay of civilizations, including the western civilization, owes their origin and nurturance to ancient Greek philosophers such as Plato and
Aristotle are still mentioned today in nearly all facets and disciplines of life. The impact of ancient Greek Philosophy. In Internet Encyclopedia of Philosophy. 2010. Web.Barnes, J. Early Greek Philosophy, 2nd Ed. London: Penguin Books. 2001. Web.Boeree, C.G. The
